Define identifiable Business Context (BC)
Define identifiable Business Context references (BC reference)
Define BC reference
Delete central design time cache
Configure service definitions consumer proxy and service proxy
Configure service definitions for this service consumers with limited capabilities
Define logon data used to business scenario configuration
Define logon data
Process pending tasks generated by business scenario configuration
Process pending tasks
Configure multiple service definitions and service groups supporting change management
Configure multiple service definitions and service groups
Define rules for determining receiver BC reference during service group runtime
Configure receiver BC reference during service group runtime
Define rules for determining receiver BC reference during service group runtime
Define rules for determining receiver BC reference and authentication method during consumer factory runtime
